PROFESSIONAL SUMMARY

Android Developer with 4 years of experience delivering high-quality apps for Android and Android Automotive OS. Skilled in Kotlin, Jetpack, MVVM, and AOSP customizations, with hands-on experience implementing OEM-specific UI, system components, and performance-optimized in-vehicle features. Strong collaborator with a focus on clean architecture, scalability, and seamless user experiences.

TECHNICAL SKILLS

Languages & Frameworks: Kotlin, Java

IDE: Android studio, VS code, Android studio for platform (ASFP)

Android: Android App components, MVVM, Android SDK

Build & DevOps Tools: AOSP, Git, Gradle, GitHub CI/CD, AWS, Gerrit, Android remote test farm (MTK), Jfrog

UI & other Tools: Figma, Jetpack compose, DLT log viewer, Logcat, ADB,

Code Quality & Collaboration: Jira, Confluence, Agile/Scrum, SonarLint

OS: Linux, Windows

PROFESSIONAL EXPERIENCE

Android Developer

Accenture (Client – German OEM) | Feb 2024 – Current

Car Settings App

- Customized Car Settings UI with OEM-specific Figma designs using build-time & RRO overlays, delivering 100% design compliance.
- Successfully integrated jetpack compose into car settings app built with soong build system & traditional view architecture.
- Enhanced core Android UI components (Toast, Permission dialogs, Activity Chooser) to meet branding guidelines, ensuring consistent OEM user experience.
- Implemented deep linking functionality to enable seamless navigation between Car Settings and Memory apps, enhancing user flow.
- Validated and passed CTS test cases for App Info, Storage, and Permission Controller modules, ensuring regulatory compliance.

Memory App

- Designed and developed a separate Jetpack Compose UI version of the Memory app, modernizing the user interface.
- Integrated app management features (uninstall, clear storage/cache, enable/disable) into Compose UI components, improving usability and system consistency.

Wrapper App

- Used Content Provider to facilitate secure data exchange between the app and other applications.
- Integrated a manifest-registered BroadcastReceiver to automatically detect system locale transitions & dynamically update app title language.
- Developed intent-handling functionality to capture car settings intents and display context-specific content within OEM UI library components, enabling customized in-car user experiences.

Android Developer

Accenture (Drive smart app) | Dec 2022 – Feb 2024

- Worked on developing Ui for IVI android application to enables IVI features such as Hvac, Tire pressure with help of Vhal properties.
- Brought up AAOS 11 & 12 on Raspberry Pi 4, enabling rapid prototyping for demo systems
- Set up and maintained AWS-based AAOS test environments (EC2 x86 & ARM), providing remote access to 30+ developers and shortening testing cycles.
- Led 15+ client demos and showcased IVI virtualization features at Bharat Mobility Conference 2024, driving customer interest and adoption.
- Deployed and managed remote test farm used by 30+ distributed team members, enabling seamless global testing.
- Configured and executed CTS compliance tests locally and on AWS EC2, ensuring alignment with Google certification standards.

Android Developer

Accenture (Satellite messaging & Billing gateway solution app) | Oct 2021 – Dec 2022

- Handled setting up a remote Android test farm using Raspberry Pi 4, enabling 24/7 access for developers/testers across geographies, improving test efficiency by 40%.
- Flashed and validated 2+ custom Android MTP devices with android OS builds.
- Executed 40+ automated and manual test cases, identifying critical defects pre-release and improving product quality.
- Delivered 3+ client demos, effectively showcasing feature readiness and securing stakeholder confidence.

EDUCATION

B.Tech in Mechanical Engineering

MITS | Graduated: 2021

AWARDS

Received the ACE (Extra Mile) Award for two consecutive years (2022 & 2023) at Accenture.

COLLABORATION & TEAM BUILDING ACTIVITIES – MUNICH (2024 & 2025)

- Participated in a week-long team-building and technical collaboration session with on-site teams in Munich, Germany.

- Engaged in discussions with the client to review open points and align on the future roadmap for team responsibilities.
- Attended a technical workshop on leveraging GitHub Copilot within the AOSP codebase to enhance development productivity.
